**VENTILATION FOR THE LAUNDRY**

**ANOTHER FANTECH VENTILATION SOLUTION**

**DRYER BOOSTER FANS** are specially designed to solve the problems caused by long duct runs on clothes dryers. Long duct runs with multiple elbows can cause extended drying time as well as lint and moisture build-up within the dryer duct.

**WHEN IS A DRYER BOOSTER NECESSARY?**

According to some dryer installation instructions and local building codes, booster fans should be added in the dryer duct run when the length of the duct exceeds 25 feet with no bends, 20 feet with one bend or 15 feet with two bends.

Dryers were designed to be located on an outer wall and directly vented out of the building. In today’s home, condo and apartment designs the laundry has been moved to interior locations causing the use of extensive lengths of duct. Most typical dryers cannot operate efficiently against the resistance created by the necessary duct work. In these applications a dryer booster fan is the perfect solution.

**HOW DO THEY WORK?**

When the dryer is on, Fantech’s patented pressure sensing switch automatically turns the booster fan on. The warm, moist air in the dryer duct is exhausted quickly.

**CALculating Duct Run**

To calculate the length of your planned duct run, measure from the dryer to the external venting point in roof or wall. For each bend or elbow add 5-7 feet to your total duct run calculations. All of Fantech’s Dryer Boosters can be used on runs up to 130 feet except the DBF110 which is effective up to 108 feet.

Always consult local codes before installation.
DBF4XL Metal Dryer Booster

Tap into the power of this dryer booster fan which can be used on duct runs up to 130 feet. Includes fan with galvanized steel housing, automatic pressure sensing switch, mounting bracket, hardware and 5½ foot power cord with plug. Pressure switch activates fan when dryer comes on. Backward inclined impeller allows lint to pass through the fan.

DBF4XLT “Intelligent” Dryer Booster

The newest dryer booster fan from Fantech is the most advanced in the industry. The unit can be used to effectively boost dryer exhaust in duct runs up to 130 feet. Fan features galvanized steel housing and integrated airflow sensing switch. Additional components include: mounting bracket, quick-connect/disconnect duct collar, 5½ foot power cord with plug plus wall-mount indicator panel. LED light on wall panel lets homeowners know fan is working properly.

Per HVI’s Certified Ratings Program, charted airflow performance has been derated by a factor based on actual test results and the certified rate at 2 inches WG.
DB10 Pressure Switch

Automatic pressure switch allows for fully automatic operation of RVF4XL dryer booster fan. Fan runs for 10 minutes when positive pressure is sensed in the duct then shuts off and turns on again as needed. Switch suitable for 115 volt supply. 2 amp rating.

DBLT4 Lint Trap

Paintable galvanized metal lint trap for dryer boosting applications. Use when duct length between dryer and booster fan is less than 15 feet. Fits 4-inch duct. Features pull out door with view window, removable lint filter for easy cleaning and 1/2” flange for flush mount installation.

DBF110 Dryer Booster Fan

This Fantech Dryer Booster Fan is engineered of thermoplastic resin and features an integrated automatic pressure switch. It can be used on dryer duct runs up to 108 feet. The fan’s backward inclined blades allow lint to pass through the fan.

RVF4XL Exterior-Mount Exhaust Fan for Dryer Boosting

Fantech’s popular exterior-mount exhaust fan with white, powder-coated metal housing can be used for dryer boosting when paired with a DB10 Pressure Switch (purchase separately). Ideal for condos and apartments as well as homes. Effective on duct runs up to 130 feet. Pressure switch automatically activates the fan when the dryer comes on.
